

**Amendments to the Claims**

**This listing of claims will replace all prior versions, and listings, of the claims:**

1. (currently amended) An apparatus for mounting an electronic device to a rack system, comprising:
  - a frame assembly;
  - at least two rails mounted on opposite sides of the frame assembly; and
  - a plurality of hangers provided on opposite sides of the electronic device, said plurality of hangers retracting into the opposite sides so to fit the electronic device can fit into said frame assembly between said at least two rails and then said plurality of hangers expanding from the opposite sides to engage, and said plurality of hangers engaging said at least two rails and to support the electronic device on said at least two rails in the frame assembly.
2. (currently amended) The apparatus of claim 1, wherein the plurality of hangers slide in further comprising a channel formed in each of said at least two rails as the electronic device slides into and out of the frame assembly.
3. (currently amended) The apparatus of claim 1-2, wherein said plurality of hangers biasably release from the opposite sides to engage into the channels formed in said at least two rails.
4. (currently amended) The apparatus of claim 1, wherein the electronic device is a computer server, router, or disk storage-slidable on said plurality of hangers along at least a portion of said at least two rails.
5. (currently amended) The apparatus of claim 1, wherein said frame assembly comprises a plurality of posts, the electronic device is supported in said frame assembly between said plurality of posts.

6. (original) The apparatus of claim 1, wherein said at least two rails are mounted between adjacent posts of said frame assembly.
7. (currently amended) The apparatus of claim 1, wherein two of said plurality of hangers are provided on opposite sides of the electronic device and biasably expand from chambers formed in the opposite sides.
8. (original) The apparatus of claim 1, wherein said plurality of hangers are cylindrical.
9. (original) The apparatus of claim 1, wherein said plurality of hangers are triangular-shaped.
10. (original) The apparatus of claim 1, wherein at least one of said plurality of hangers comprises a ramp portion.
11. (original) The apparatus of claim 10, wherein the ramp portion engages said frame assembly to automatically retract the at least one hanger.
12. (original) The apparatus of claim 1, wherein at least one of said plurality of hangers comprises a stop portion.
13. (currently amended) The apparatus of claim 12, wherein the stop portion engages said frame assembly to prevent said electronic device from sliding beyond a predetermined position in said frame assembly.
14. – 20. (canceled)
